**ER Limit Definitions

- (1) Exploitation Rate (ER): the fraction of total mortality (i.e., in fisheries and on spawning grounds) that occurs in fisheries; fishery mortality includes landed and non-landed components and accounts for the likelihood that a fish, had it not been killed in a fishery, would have survived to maturity
- (2) Total ER: The exploitation rate across all fisheries, Alaska, Canada, Southern US, freshwater and marine.
- (3) Southern US ER (SUS): The exploitation rate across all fisheries, excluding mortality in Canadian and Alaskan fisheries.
- (4) Preterminal Southern US ER (PT SUS): The SUS ER excluding fishing mortality in terminal net and freshwater sport and net fisheries.
